### **DETAILED ACTION**

This is responsive to Applicant's response filed on 7/26/05.

#### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-6 and 30-36 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Applicant claims in claim 1 that "...waveguide formed by said diffraction grating....". It is not clear whether the diffraction grating is formed in the waveguide or the diffraction grating is the waveguide.

The "the interrogation system" in the claims 1 and 30 is not positively claimed, therefore, the interrogation system is not given any patentable weight. Note further that any waveguide film can receive any light signal, and outputs light signal that can be detected by any optical detector.

Note that "a biological substance" is again not positively claimed in the claim 30. It will be clear in the claim if the polarization-modulate light beam source, the detail structure of "optical interrogation system", the sensor region of the waveguide are clearly defined.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

**Claims 1-6 and 30-36 are rejected under 35 U.S.C. 103(a) as being unpatentable over Uchiyama et al [USPAT 6,903,815].**

Uchiyama et al disclose an optical waveguide sensor comprising:

A substrate 1;

A diffraction grating 3a, 3b; and

A waveguide film 2 receiving laser light 21, wherein a biological substance, such as enzyme, is located in a sensing region above the waveguide film [see column 8, lines 15-16].
